# Genomic Life

Bringing the science of today to the medicine of tomorrow.

### Program Description:

Genomic Life is accelerating genomic medicine and proactive health for *everyone*, by turning personal genetic insights into impactful clinical actions. Understanding your unique genome can help predict future risk, inform treatment, and drive high-impact approaches to optimize your health.

### Program Features:

Our genome benefit management program facilitates access to genetic tests and services that yield actionable results. Genomic Life's current product offering includes three proactive health tests and additional services:

- The Genetic Health Screen analyzes 147 genes, identifying elevated health risks for cancer, cardiac disease, and other critical illnesses.
- The Carrier test uncovers genetic insights from both you and your partner during family planning. These insights help to mitigate the risk of serious illness in offspring, supporting healthy deliveries and childhoods.
- The Pharmacogenomics (PGx) test analyzes the unique way an individual responds to medications to optimize treatment, maximize effectiveness, and minimize side effects.
- Genetic counseling is available as both pre- and post-test guidance for clinical action planning.
- The Clinical Information line can be utilized day one by you and your immediate family for questions, concerns, and care-giving advice.

### Post-diagnosis services:

For members with a cancer diagnosis, we offer precision cancer services through our Cancer Guardian program that deliver personalized support and expert cancer navigation resources:

- Nurse Advocates are a critical part of the care team and navigators for all services.
- Comprehensive Genomic Profiling identifies the right therapy for each patient, since each cancer is unique.
- Expert Pathology Review confirms cancer diagnosis, grade, and molecular status.
- Cancer Navigation Services include clinical trial matching, financial services, and insurance benefits optimization.

Genomic Life can transform healthcare journeys from impersonal, confusing, and stressful into personalized, predictive, and proactive experiences — providing the information and expertise to you and your doctors precisely when you need it.
